Optimising Energy Performance and Reducing Operational Costs

Energy management is no longer simply about monitoring consumption. For modern organisations, it means understanding how energy is purchased, used and optimised across operations.

Nationwide Utilities helps businesses develop structured energy management strategies that improve efficiency, control costs and support sustainability objectives.

Through data analysis, reporting and strategic planning, we provide the insight organisations need to manage energy as a strategic resource.

Why Energy Management Matters

Cost Control

- **Improved monitoring and validation** ensures businesses only pay for the energy they actually use.
-

Operational Efficiency

- **Understanding energy consumption patterns** enables organisations to optimise processes and reduce waste.
-

Sustainability & ESG

- **Effective energy management** supports carbon reduction targets and sustainability reporting.
-

Strategic Planning

- **Clear energy data** helps organisations plan infrastructure, procurement and decarbonisation initiatives.

Our Energy Management Services

Bill Validation & Cost Recovery

- **Energy invoices are often complex and errors can occur.** Our bill validation service ensures energy charges are accurate before payment is made.
- **Our bill validation service** ensures energy charges are accurate before payment is made.

Consumption Reporting

- **Understanding when and how energy is used** across your organisation is essential for improving operational efficiency.
- **Using consumption data, trends and market intelligence**, we develop forecasts that help you budget, manage procurement and make informed decisions.

Forecasting & Budget Planning

- **Effective energy planning** requires visibility over future consumption and costs.
- **Using consumption data, trends and market intelligence**, we develop forecasts that help you budget, manage procurement and make informed decisions about future energy requirements.

Market Tracking & Trigger Alerts

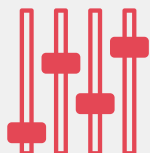

- **Energy markets can move rapidly**, making procurement timing critical.
- **Our Insights platform track wholesale energy prices** in real time and generate alerts when predefined price triggers are reached.

How Nationwide Utilities Supports You

Assesment & Analysis

We evaluate your current energy usage, billing arrangements and operational requirements.

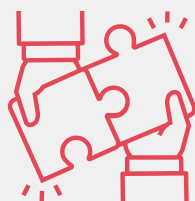

Data & Insight

Advanced reporting and monitoring tools provide clear visibility into energy performance.

Strategic Planning

Our specialists develop tailored strategies that balance operational needs, cost control and sustainability goals.

Ongoing Optimisation

Continuous monitoring and advisory support ensures energy strategies evolve with changing business requirements.

How we work with **you**

01.

Discovery & Consultation:

Understand your power requirements and energy decarbonisation goals.

02.

Strategic Planning:

Align solutions with your operational and financial needs.

03.

Implementation & Optimisation:

Seamless contract finalisation and energy procurement.

04.

Ongoing Management:

Continuous support to optimise and future-proof your energy strategy.

Proven Success

Case Study: Flexible procurement strategy to lower portfolio costs.

Client: Allen Ford Motors

Challenge

Allen Ford Motors operates a 30-site footprint across the south of England, from Bath and Swindon in the west, through the Midlands, Berkshire and London, to Kent and Essex in the south east. The portfolio spans showrooms, workshops and offices, each with different trading patterns and load profiles, which makes energy buying and budgeting inherently complex.

Solution

Rising wholesale prices, mismatched suppliers, varied contract end dates and years of unvalidated billing had introduced cost and operational risk. The brief was simple to state and hard to deliver. Simplify. Secure. Save.

- **Procurement:** Fixed and flexible contract management using our Insights Platform to support smarter, better-timed buying decisions.
- **Bill Validation:** Billing issues resolved, recovery of overcharges and assisted with debt management.
- **Metering Services:** Coordinated new meter installations, upgrades, removals and disconnections.
- **Energy Audit:** Audited operations and implemented strategies aligned with client objectives
- **Reporting & Forecasts:** Regular reporting provided detailing energy spend, usage trends, and forward forecasts.
- **Portfolio Management:** Oversee of entire utility portfolio, ensuring contracts, renewals, and end dates are aligned.
